DETAILED ACTION

Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-9 is the inclusion of the limitation of an antenna connection module comprising an anchor bump located in the antenna dock corresponding to the anchor troughs such that when the antenna dock is turned relative to the rotary tray the anchor bump is engaged with one of the anchor troughs. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Aoto (U.S. Patent No. 5,022,861) teaches a rotary antenna connector includes a rotary shell rotatably fitted with a stationary shell. A plurality of radial grooves in the stationary shell are engaged by balls resiliently urged between the rotary and stationary shells. Engagement of the balls in the grooves holds an angular position of the antenna connector. However, Aoto does not disclose or suggest an anchor bump located in the antenna dock corresponding to the anchor troughs such that when the antenna dock is turned relative to the rotary tray the anchor bump is engaged with one of the anchor troughs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
